In partial fulfillment of academic requirements
for the course
CS 191 Software Engineering I
of the
1st Semester, AY 2016-2017

Unique Reference:

The documents are stored in the <https://github.com/dbrecuerdo/CS191-Project>.

Document Purpose:

This document is to provide an overview of the functionalities and features of the project as well as a brief discussion of these.

Target Audience:

Any interested party in reviewing or knowing more about the project.

Revision Control**History Revision:**

Revision Date	Person Responsible	Version Number	Modification
09/30/16	Jairus John A. Garcia	1.0	Initial Document; Complete All Necessary Details

Use-Case Name: 5.1 Add Event

Description: The owner can add an event on a calendar through this function. The user is required to input necessary details of the said event. The event will then be included in the specified calendar and can be viewed by both the owner and the viewers of the calendar.

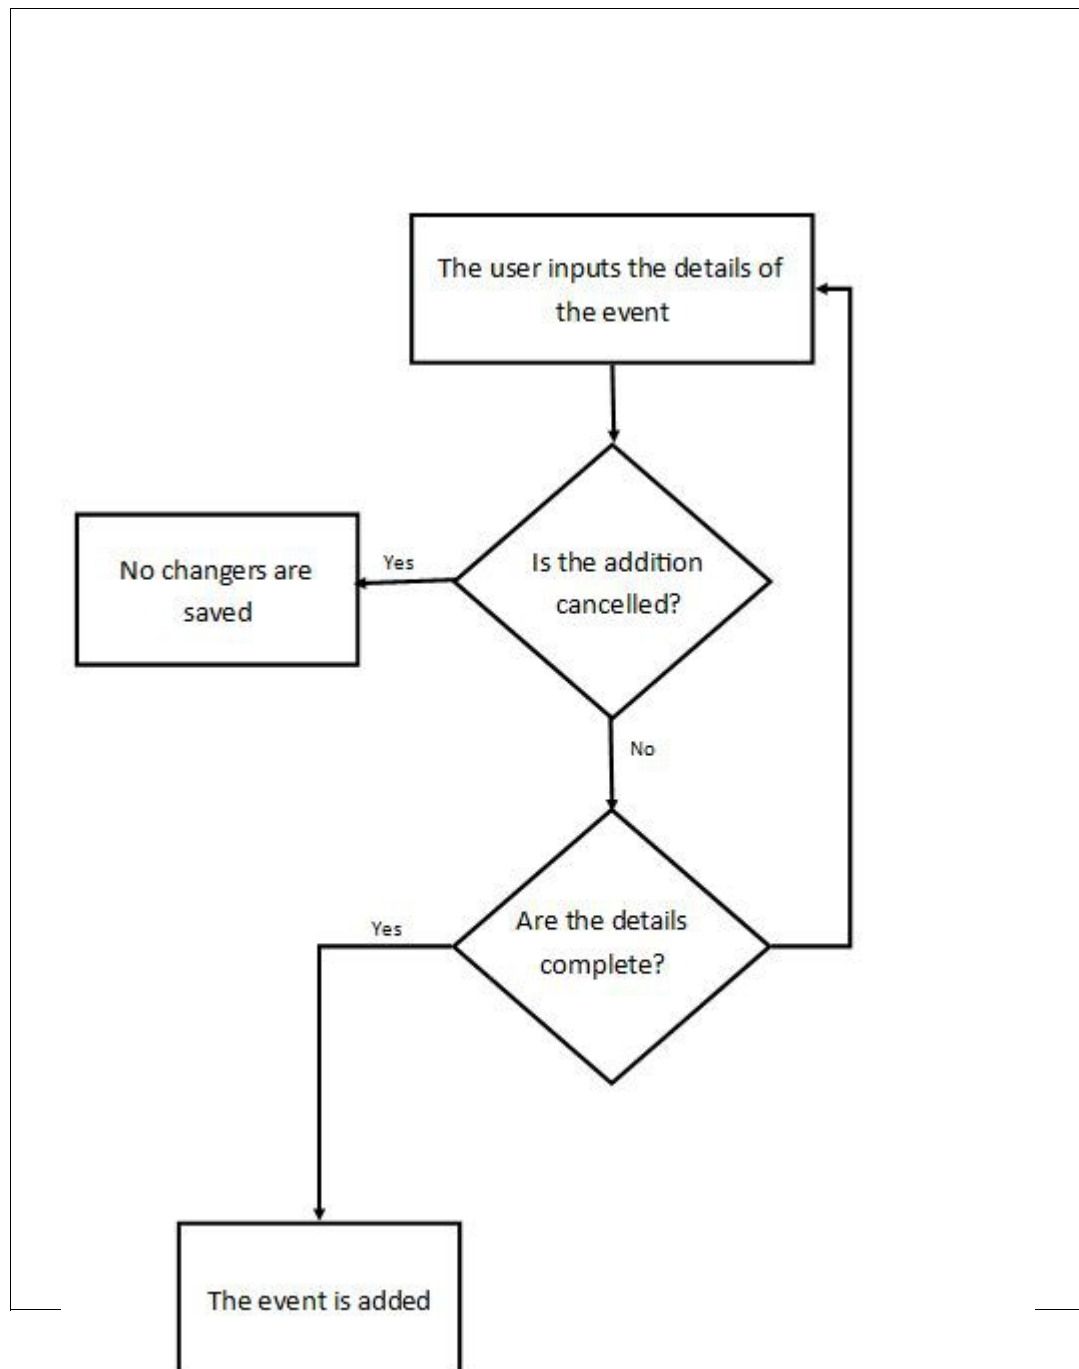

Preconditions:

- The current user already has an account and is currently logged-in.
- The user has already created a calendar

Flow of Events:

Scenario Name	Description
Scenario 1 (Basic Flow) The user adds a new event	<ol style="list-style-type: none">1. The user inputs the necessary details of the event.2. If the details are complete, the event is added.
Scenario 2 The details of the event are incomplete	<ol style="list-style-type: none">1. The user inputs the details of the event.2. If the details are incomplete, the user is prompted to complete it.3. Return to step 1.
Scenario 3 The user cancels the addition of event	<ol style="list-style-type: none">1. The user inputs the details of the event.2. If the user cancels the adding of event, no changes are saved.

Activity Diagram of the Flow of Events:

Postcondition: NONE

Relationships: This is an extension of use-case 6.0 – Maintain Calendar

Special Requirements:
