CS 191 Software Engineering I
of the
1st Semester, AY 2016-2017

Unique Reference:

The documents are stored in the <https://github.com/dbrecuerdo/CS191-Project>.

Document Purpose:

This document is to provide an overview of the functionalities and features of the project as well as a brief discussion of these.

Target Audience:

Any interested party in reviewing or knowing more about the project.

Revision Control**History Revision:**

Revision Date	Person Responsible	Version Number	Modification
09/30/16	Jairus John A. Garcia	1.0	Initial Document; Complete All Necessary Details

Use-Case Name: 5.2 Edit Event

Description: This use-case lets the calendar owner edit a previously added event. The user must input the updated details of the event. The output will be an edited event as input by the user.

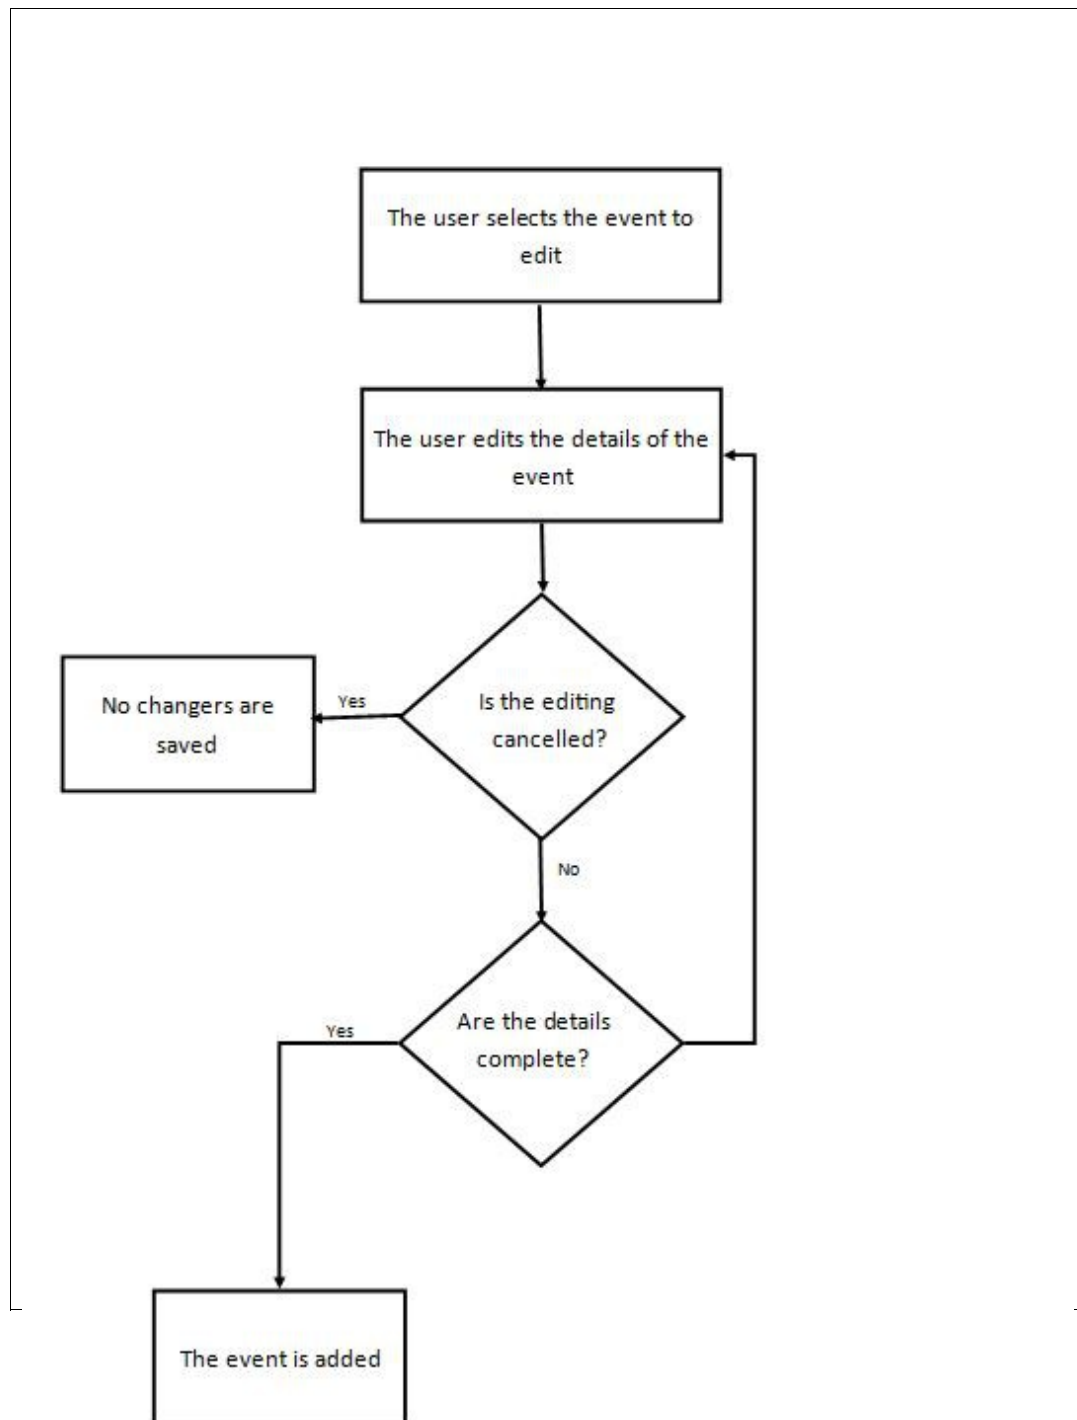

Preconditions:

- The current user already has an account and is currently logged-in.
- The event to be edited is already created.

Flow of Events:

Scenario Name	Description
Scenario 1 (Basic Flow) The user edits an existing event	1. User selects the event to be edited. 2. The user edits the details of the chosen event. 3. If the details are still complete, save changes.
Scenario 2 The user edits an existing event with incomplete details.	1. User selects the event to be edited. 2. The user edits the details of the chosen event. 3. If the details are now incomplete, prompt the user to fill-up the missing details. 4. Go to step 1.
Scenario 3 The user cancels the editing of an event.	1. User selects the event to be edited. 2. The user edits the details of the chosen event. 3. If the user cancels the editing, no changes are saved.

Activity Diagram of the Flow of Events:

Postcondition: NONE

Relationships: This is an extension of use-case 5.0 – Maintain Calendar Events

Special Requirements:
NONE
