Use-Case Name: 2.1 – Create Calendar

Description: This use-case enables the user to create a calendar under the owner-ship of the user. The output calendar can be populated with events related to the subject of the calendar. The required input for this use-case is the name of the calendar. Upon creation, a calendar code will also be produced which can then be shared to other users to let them view the created calendar as well as its events.

Preconditons: NONE

Flow of Events:

Scenario Name	Description
Scenario 1 (Basic Flow) Creation is successful.	1.Input calendar information. 2.Computer records input. 3.An calendar is created.
Scenario 2 Cancellation of Calendar Creation	1.Input calendar information. 2.User cancels creation.

Input calendar information. → Computer records input. → A calendar is created.

Input calendar information. ↓ Creation Cancelled.

Postconditons: A new calendar that can be shared according to the user preferences has been created.

Relationships: This is an extension of use case 2.0 – Maintain Master Calendar.

Special Requirements: NONE
